Profile

Software engineer with eight years building backend platforms and developer tooling at growth-stage B2B SaaS companies. Track record shipping production APIs, CI/CD pipelines, and observability stacks. Comfortable owning services end-to-end from design through on-call. BSc Computer Science from the University of Amsterdam.

Core Competencies

- **Backend:** Python, Go, PostgreSQL, Redis, REST and gRPC APIs, event-driven services
- **Platform:** Kubernetes, Helm, Docker, GitHub Actions, Terraform (AWS)
- **Observability:** Prometheus, Grafana, structured logging, distributed tracing
- **Practices:** Test-driven development, code review, technical design documents

Experience

Senior Software Engineer

Nexus Labs

📅 March 2022 – Present

📍 Amsterdam, Netherlands

B2B workflow automation platform serving mid-market logistics customers.

Platform & Reliability

- Led migration of monolithic job runner to queue-based workers on Kubernetes, cutting p95 job latency from 12s to 3s
- Built internal deployment CLI used by 40+ engineers; reduced staging deploy time from 25 minutes to 6 minutes
- Introduced SLO dashboards and alert routing; mean time to detect dropped from 45 minutes to 8 minutes

API & Data

- Designed public REST API v2 with versioning and rate limiting; supported three major customer integrations without breaking changes
- Optimised PostgreSQL query paths for reporting module; reduced warehouse sync duration by 60%

Software Engineer

DataFlow Inc

📅 June 2018 – February 2022

📍 Utrecht, Netherlands

Analytics ingestion startup acquired in 2021.

- Built Python ETL services processing 2M events daily into BigQuery and Postgres
- Owned on-call rotation for ingestion pipeline; documented runbooks adopted by support team
- Mentored two junior engineers through first production feature launches

Education

BSc Computer Science · University of Amsterdam | 2014 - 2018
